Every token you buy: safer, smarter, cheaper.

One endpoint. A whole market of models and GPUs behind it.

Joseph Perla, Founder & CEO

OCTOBER 2026

trustedrouter.com

nytokenexchange.com

Confidential

Experienced founder. AI-native team.

Every layer this company needs has been shipped in production before: GPU cloud, model research, safety-critical systems.

JP

Joseph Perla

FOUNDER & CEO

Biology Olympiad silver medalist

AI-native team

San Francisco and New York

Engineers and sales, building with AI at every layer.

- **Princeton**
  Computer science, AI and cryptography. Built for the DARPA Grand Challenge autonomous vehicle.
- **Bridgewater Associates**
  Research, while at Princeton.
- **Turntable.fm**
  Founder. A music app that went viral and topped the charts, until the music labels shut it down.
- **Facebook**
  Tech lead for News Feed on iOS, through the company's move to mobile.
- **PhD in AI, left to build**
  Neural networks in C, years before TensorFlow.
- **Terminal.com**
  Founder. The first GPU neocloud, acquired by Udacity. Co-founded with Danny Krause, Varun Ganapathi and Jeff Wu (GPT-2, 3, 4).
- **Lyft**
  One of the first fifty engineers, through the IPO. Level 5 self-driving: behavioural planner, LIDAR, localisation.
- **Hangout**
  Founder and CEO of the music startup, acquired this year.

Live since May. Growing every month.

Operating an exchange today, with paying customers and no marketing.

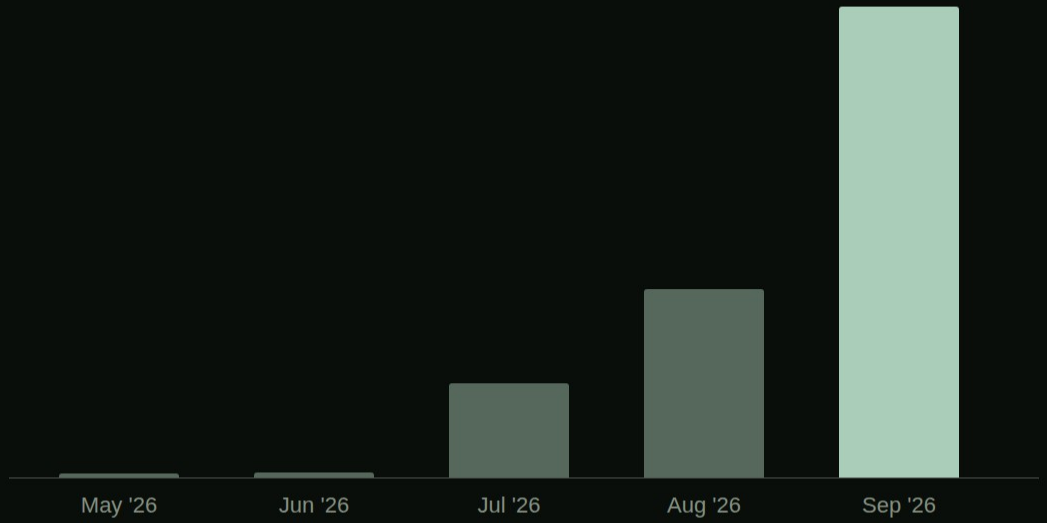

1T+
TOKENS · ANNUAL RUN RATE

Thousands
OF CUSTOMERS ON THE EXCHANGE

100+ · 600+
PROVIDERS · MODELS

170,974
DOCUMENTS · FIRST ENTERPRISE, LEGAL AI, IN PRODUCTION

TOKEN VOLUME · MONTH BY MONTH SINCE LAUNCH

Company data. Monthly tokens routed through the exchange.

Every provider is a separate deal.

Different APIs, contracts, prices and promises. None of them can be checked.

AGENTS AND APPS

Every team

- Coding agents
- Customer support
- Document workflows
- Internal assistants
- Product features

A GATEWAY OR DIRECT SDKS

Built and run in-house

- Keys and budgets per provider
- A contract per provider
- A DPA per provider
- Rework when models change

FRONTIER LABS

List price, their terms

CLOUD-HOSTED MODELS

Committed spend

OPEN-WEIGHT MODELS

A few hosts you vetted

List price

One quote per provider. No benchmark.

Moving

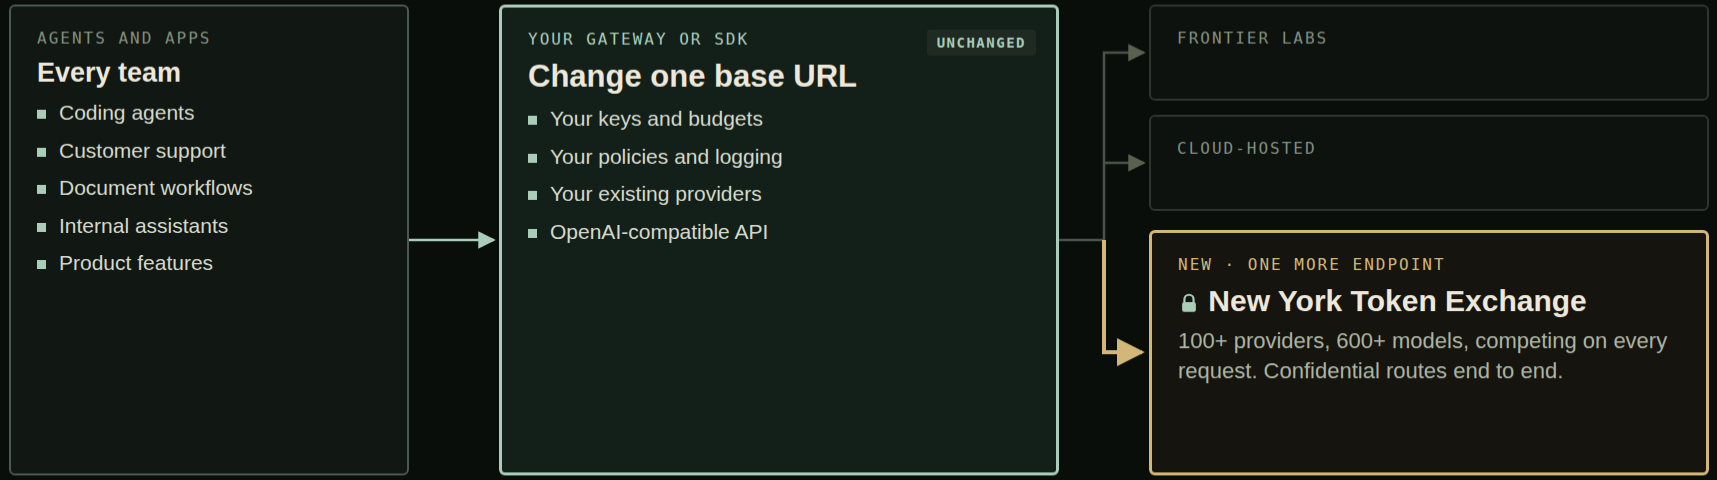

Prices change monthly. So do budgets.

On paper

Privacy rests on a contract and a promise.

Add one endpoint. Keep everything else.

OpenAI-compatible. Your code, keys and controls stay. The exchange adds supply, competition and proof.

DAY 1
Point one app at the OpenAI-compatible endpoint. Change one URL.

WEEK 1
Route one workload. Your keys, budgets and policies still apply.

MONTH 1
Compare cost, quality and latency. Expand by policy.

More supply. More competition. Lower prices.

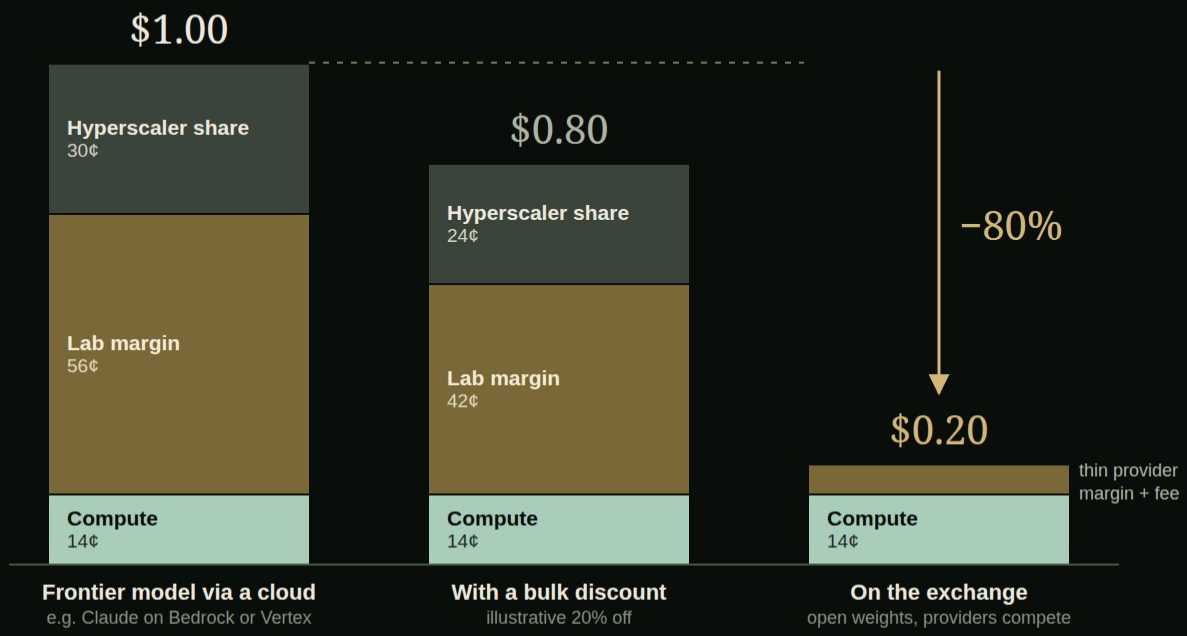

New York Token Exchange

100+ providers · 600+ models · eligible GPU capacity worldwide

Illustrative, not to scale

Most of what you pay is margin.

Through a cloud, about 30¢ of every dollar goes to the hyperscaler and most of the rest is lab margin. Competition takes it out.

70–80%

lower price per token when providers compete on open weights

Bulk discounts trim 10 to 30%. The margin stays.

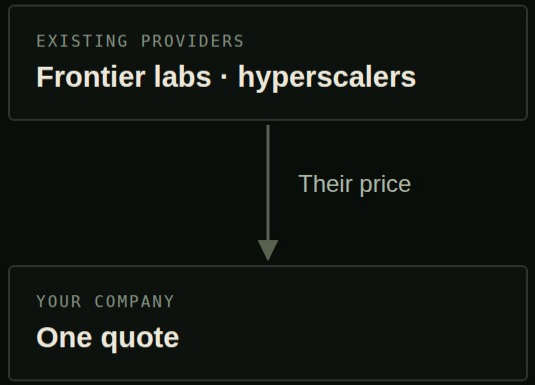

Smaller models cut quality, not margin.

Move 40% of spend and save about 32% overall.

Illustrative, per $1 of list price. Estimates: ~80% lab gross margin, ~30% hyperscaler share. Not company-reported.

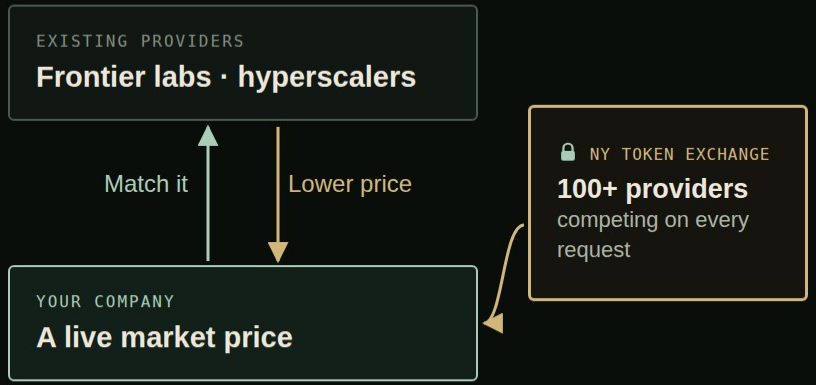

Add one endpoint. Negotiate every contract.

WITHOUT A BENCHMARK

Switching is a migration.

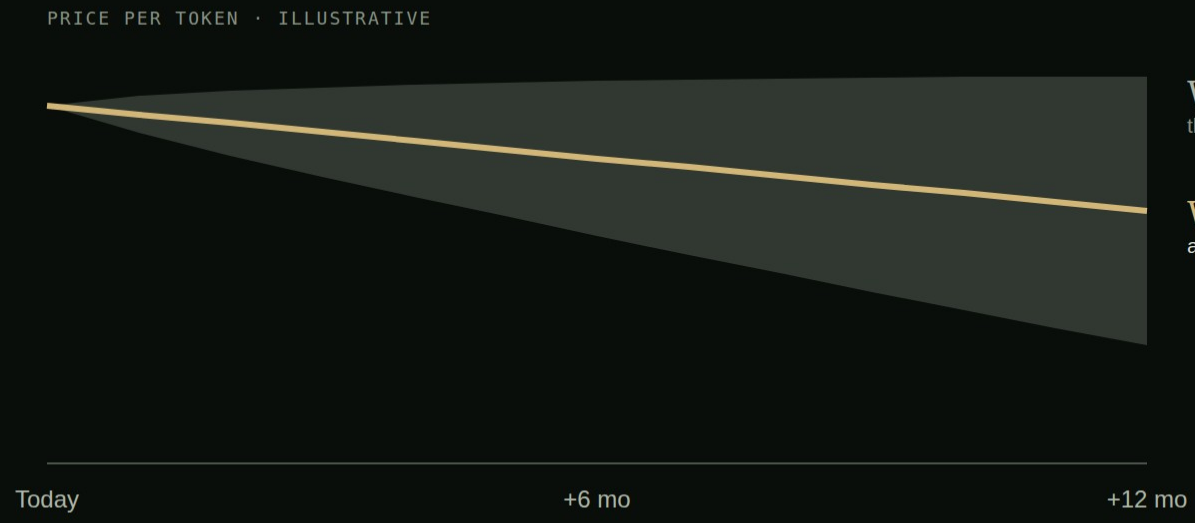

WITH THE EXCHANGE

Switching is a policy change.

Traffic you never move still gets cheaper.

Lock next year’s token price today.

Without futures

the budget moves with the market

With token futures

a price you can put in the plan

And on the other side

Run your own GPUs? Sell idle hours on the same exchange.

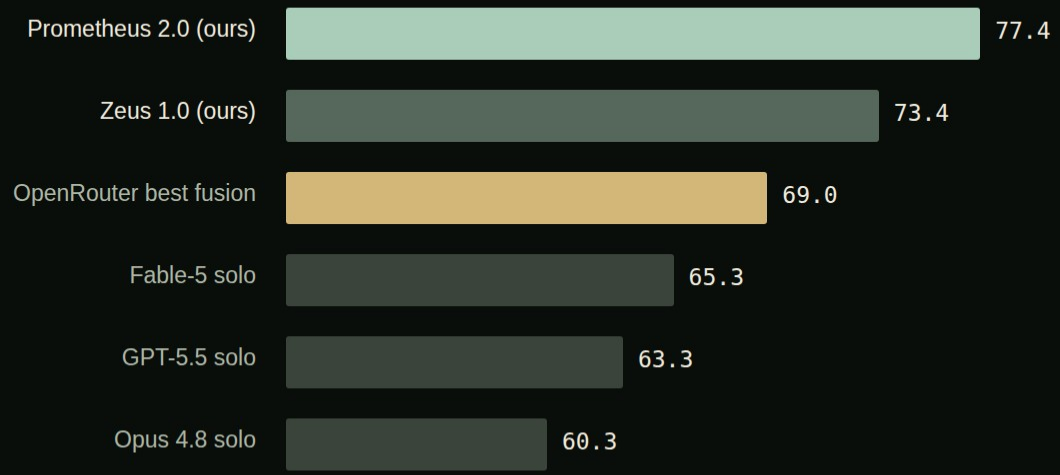

JANUARY 2027 · WITH PARTNERS TO BE ANNOUNCED

Forward-looking. Terms under NDA.

Fusion models that beat every frontier model.

Many open models answering together, which only works with multi-provider supply. That is the exchange.

DRACO · 100-TASK AGENTIC DEEP-RESEARCH BENCHMARK · HIGHER IS BETTER

77.4

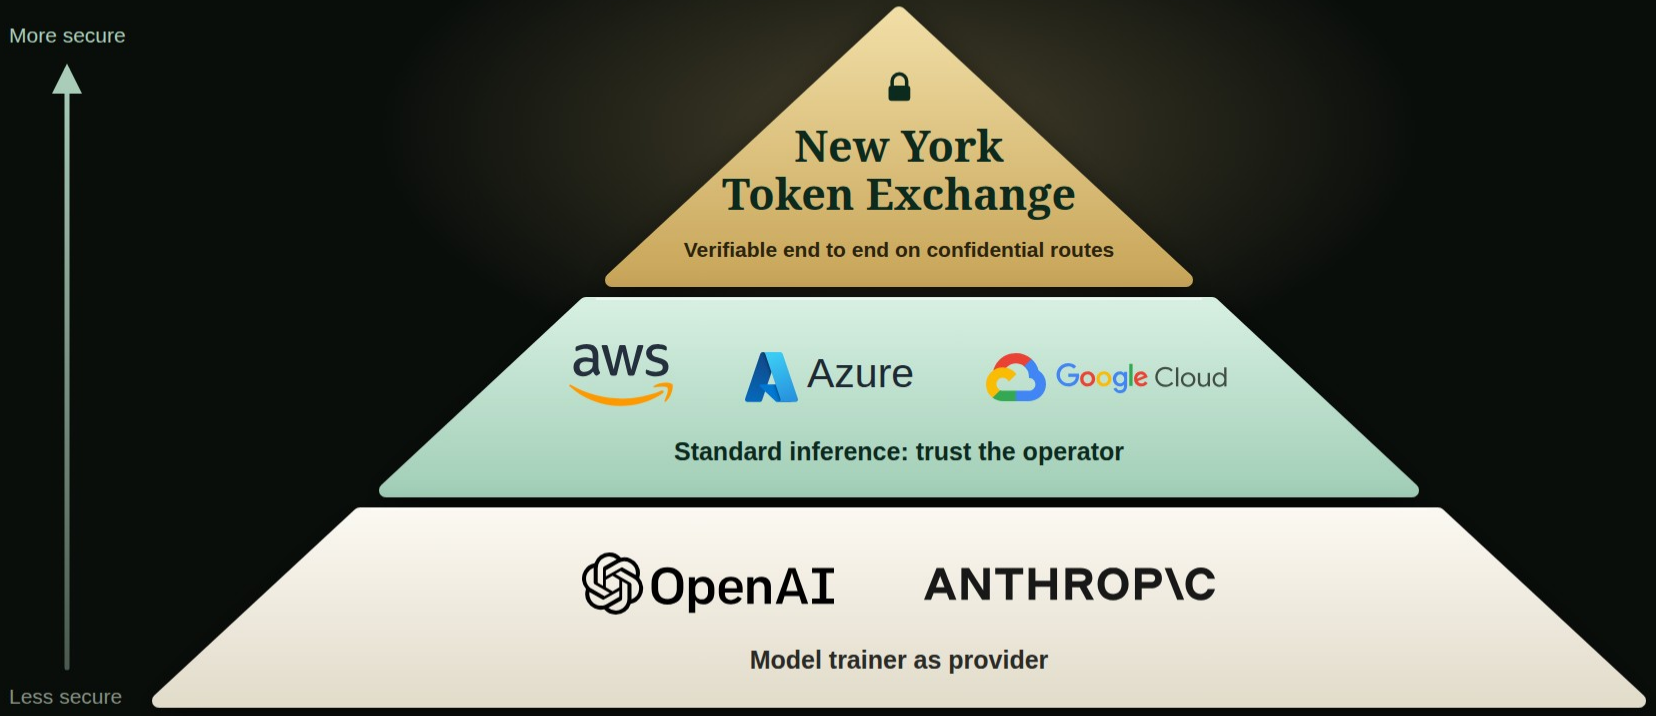

Prometheus 2.0: above every frontier model, at a fraction of the cost. Law 93.3 · Medicine 86.1.

72

Socrates on Terminal-Bench Hard: state-of-the-art agentic coding.

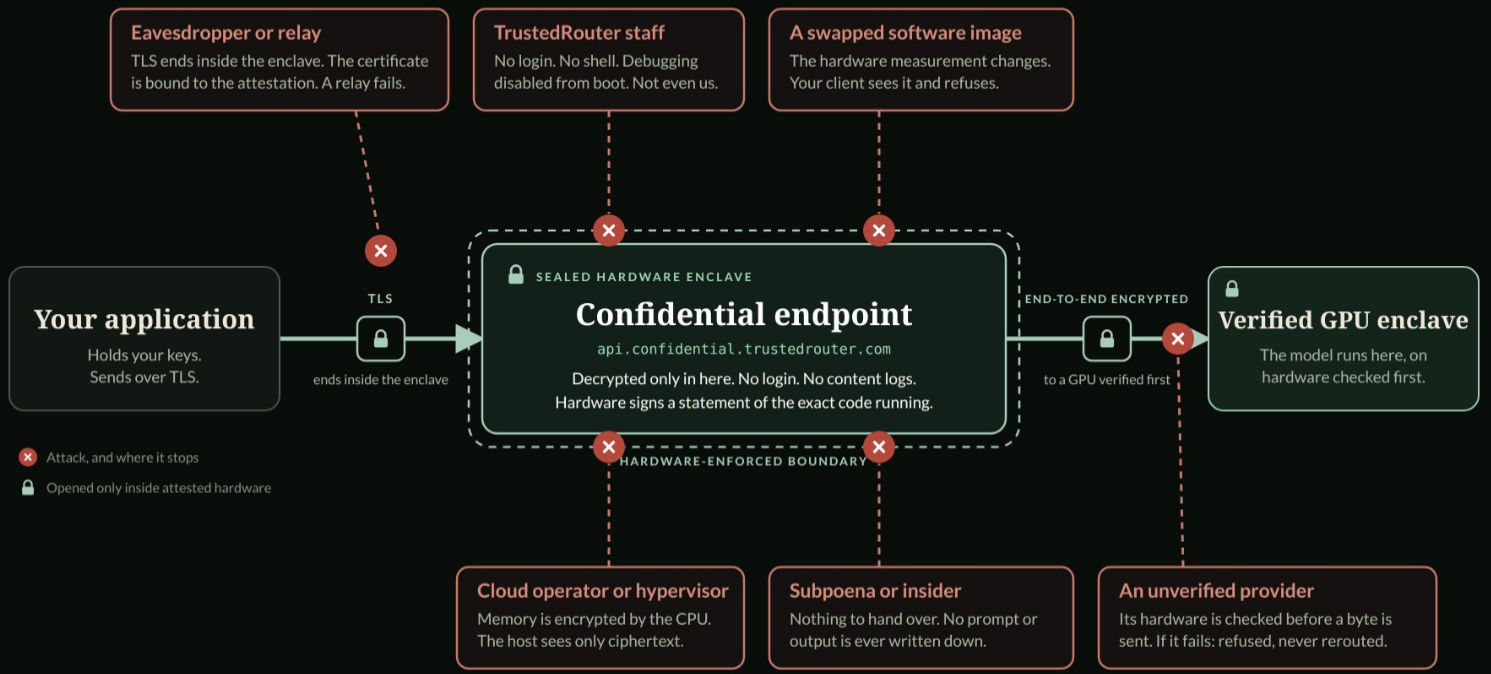

Code, results and confidence intervals: github.com/Lore-Hex

Only the top tier can be verified.

Six ways in. All of them closed.

One line from the application to the model. Every attempt to read the prompt stops at a hardware boundary.

Detail and verification steps in the security whitepaper

A 30-day pilot.

WEEK 1

Connect

Point one app at the endpoint in a test project. Your security team runs the attestation check.

WEEKS 2 TO 3

One workload

An open-weight task such as code review, support summaries or document extraction.

WEEK 4

Decide

Cost, quality and latency against today's route. Expand by policy.

WHAT WE WOULD ASK FOR

One test project, one workload, and a 30-minute technical session with your platform and security teams.

Most routes ask you to trust a contract. Ours you can verify.
